

The 74th Calorimetry Conference

The seventy-fourth calorimetry conference was organized in Santa Fe, USA from July 28th to August 1st. The Hilton Santa Fe Buffalo Thunder located at the outside area of Santa Fe city was the venue for the conference. The symposium on condensed matter physics celebrating the Huffman award of Prof. Mayron B. Salamon was arranged. I attended this memorial symposium and had an oral presentation related on our recent results of low temperature heat capacity of organic superconductive systems. The number of attendees was more than hundred and we enjoyed fruitful discussion throughout the period. Dr. S. Imajo who graduated the Ph.D course of Osaka University and now working as a research associate at ISSP (the University of Tokyo) also attended. He was staying at Los Alamos National Laboratory for his collaboration project and it was just before his finishing time of the stay. Dr. M. Hishida in the University of Tsukuba honored as Stig Sunner Memorial Award. During the conference, the organizers decided to celebrate Prof. Michael T. Henzl in University of Missouri as the Jack Aviv Award in this year because of his intensive efforts to organize CalCon in Santa Fe area. The next conference will be held in east area of USA in order to celebrate third quarter years of one hundred (one century).
