

30th May 2017

Professor Yasuhiro Nakazawa
Director of Research Center for Structural Thermodynamics
Graduate School of Science
Osaka University
Toyonaka, Osaka 560-0043, Japan

Dear Professor Yasuhiro Nakazawa ,

Take from me the sincere admiration for the creative atmosphere during my stay and work from February 15 to April 29, 2017 in your professional and friendly scientific team. During my work at the Nakazawa laboratory, three lectures were prepared on the topic of the thermal properties of molecular crystals and glassy crystals, where topical problems of low-temperature anomalies in the thermal properties of disordered solids were considered. I was interested to take part in the original experimental studies of the low-temperature thermal conductivity of a metal-organic crystal in the state of an electron glass by the stationary method of heat flow. I am delighted with the professionalism and diligence of the employees and students of your laboratory: Hiroki Akutsu, Satoshi Yamashita, Yuji Miyazaki Tetsuya, Nomoto and Shusaku Imajo. Undoubtedly, personal discussing with you of the physical properties of metal-organic crystals, as well as the nature of the calorimetric boson peak in them, were important to me. My accommodation in Tayonaka helped to get acquainted with the unique Japanese culture, way of life and language. I hope that the joint studies we have put together will produce useful results.

Many thanks.

Best regards,

Alexander Krivchikov
