Dear Professor Nakazawa-San,

I would like to express my appreciation for what you have done to make my stay in Osaka successful. I have beautiful memories of my visit to Japan. I cannot describe what a wonderful experience it was to visit your Laboratory, even if it was only for a short time unfortunately. I do wish to warmly thank you for the great experience and the possibility of contacting the students during the classes. I was privileged to spend two months working with your research group at the Research Center for Thermal and Entropic Science in Osaka. I appreciate everything you have done to show me how beautiful and amazing is your scientific work.

Thank you for the joint Japanese-Polish seminar between the laboratory in Osaka and the Condensed Phase Physics Department of the IFJ PAN.

It was very important to conduct a series of lectures on issues related to the properties of soft matter, especially the properties of liquid crystals, diols, etc. Changes in vibrational and stochastic dynamics in appropriate thermodynamic phases were discussed.

Consultations and discussions were held regarding the polymorphism of a liquid crystal substance with partially fluorinated molecules. This is a project that will continue. Also, changes in the stochastic dynamics of alcohols at various concentrations with water were analyzed. The conversations led to the publication and preparation of scientific papers.

Yours sincerely,

Ewa
